WhatsNext Vision Motors – Shaping the Future of Mobility with Innovation and Excellence

Salesforce CRM Documentation – Automotive Retail Transformation

---

This documentation presents the Salesforce CRM implementation for WhatsNext Vision Motors. The solution centralizes automotive retail information and uses Salesforce configuration, Flow automation, Apex, scheduled processing, and Lightning application components to streamline operations from customer interaction through vehicle order management and delivery.

Project Overview

WhatsNext Vision Motors leverages Salesforce to provide a centralized platform for automotive retail operations.

- Centralize and manage vehicle, dealer, customer, and order data.
- Automate workflows for order processing, dealer assignment, and operational updates.
- Enable visibility into inventory, customer records, and order status.
- Enhance customer experience through structured records and transparent status tracking.
- Create a scalable CRM foundation for future analytics and AI enhancements.

The goal is a frictionless, efficient, and customer-centric automotive retail experience.

Objectives

The main objective of this CRM is to provide WhatsNext Vision Motors with a unified Salesforce platform for managing the automotive retail lifecycle. By centralizing data and automating business processes, the solution aims to reduce manual work, improve data consistency, and support better operational decision-making.

- Manage vehicles, dealers, customers, orders, test drives, and service requests in one system.
- Automate key order and assignment processes.
- Maintain consistent data through structured fields, relationships, and validation.
- Support operational visibility through status-based records and reporting.
- Provide an extensible architecture for future improvements.

Phase 1: Requirement Analysis & Planning

Understanding Business Requirements: The CRM addresses vehicle inventory, dealer assignment, customer data, vehicle orders, and service-related processes.

Defining Project Scope and Objectives: Centralize automotive data, automate order/dealer processes, improve stock visibility, and support customer communication.

Design Data Model and Security Model: Custom objects and lookup relationships are used for vehicles, dealers, customers, orders, test drives, and service requests.

🛠️ Phase 2: Salesforce Development – Backend & Configurations

---

Environment & Development Setup: Salesforce configuration and controlled development practices are used for implementation.

Customization of Objects and Fields: Custom objects, fields, picklists, lookups, and validation-oriented configuration form the data layer.

Automation: Salesforce Flow is used for process automation such as order processing and assignment.

Apex: Apex classes/triggers and Batch Apex support custom logic and bulk processing.

Scheduled Processing: Scheduled jobs support recurring operational updates.

🎨 Phase 3: UI/UX Development & Customization

Lightning App setup through App Manager for streamlined navigation.

Tabs and application navigation configured for the project's operational objects.

Lightning App Builder used to create and arrange user-facing application pages.

Record layouts designed around customer and vehicle-order workflows.

Status-driven order experience supports Pending, Confirmed, and Delivered scenarios.

🔄 Phase 4: Data Migration, Testing & Security

Data Loading Process: Salesforce data-import capabilities can be used to migrate or prepare legacy records.

Data Quality: Validation, controlled picklists, duplicate/matching controls, and consistent relationships support clean data.

Security: Profiles, roles, permission sets, sharing rules, and field-level security form the access-control model.

Testing: Test cases cover booking/order creation, automation, Apex behavior, status updates, and scheduled execution.

🚀 Phase 5: Deployment, Documentation & Maintenance

Deployment Strategy: Move Salesforce components through controlled environments using versioned deployment practices.

Maintenance & Monitoring: Monitor automation, scheduled jobs, data quality, and user feedback.

Troubleshooting Approach: Maintain documentation for common issues and their resolution steps.

Continuous Improvement: Extend the CRM with analytics, AI, and mobile enhancements as business needs evolve.

Data Model Highlights

OBJECT NAME	PURPOSE	RELATIONSHIPS
VEHICLE__C	Stores vehicle details, stock, price, and status.	Related to Dealer & Orders
VEHICLE_DEALER__C	Stores dealer information.	Related to Vehicles / Orders
VEHICLE_CUSTOMER__C	Stores customer details.	Related to Orders, Test Drives & Service Requests
VEHICLE_ORDER__C	Tracks vehicle purchases and order status.	Related to Customer & Vehicle
VEHICLE_TEST_DRIVE__C	Tracks test-drive bookings.	Related to Customer & Vehicle
VEHICLE_SERVICE_REQUEST__C	Tracks service requests.	Related to Customer & Vehicle

Fields & Relationships

Vehicle__c

- Vehicle_Name__c (Text)
- Vehicle_Model__c (Picklist: Sedan, SUV, EV, etc.)
- Stock_Quantity__c (Number)
- Price__c (Currency)
- Dealer__c (Lookup to Dealer__c)
- Status__c (Picklist: Available, Out of Stock, Discontinued)

Vehicle_Dealer__c

- Dealer_Name__c (Text)
- Dealer_Location__c (Text)
- Dealer_Code__c (Auto Number)

Vehicle_Order__c

- Customer__c (Lookup to Customer__c)
- Vehicle__c (Lookup to Vehicle__c)
- Order_Date__c (Date)
- Status__c (Picklist: Pending, Confirmed, Delivered, Canceled)

Vehicle_Customer__c

- Customer_Name__c (Text)
- Email__c (Email)
- Phone__c (Phone)
- Address__c (Text)
- Preferred_Vehicle_Type__c (Picklist: Sedan, SUV, EV, etc.)

Vehicle_Test_Drive__c

- Customer__c (Lookup to Customer__c)
- Vehicle__c (Lookup to Vehicle__c)
- Test_Drive_Date__c (Date)

- Status__c (Picklist: Scheduled, Completed, Canceled)

Vehicle_Service_Request__c

- Customer__c (Lookup to Customer__c)
- Vehicle__c (Lookup to Vehicle__c)
- Service_Date__c (Date)
- Issue_Description__c (Text)
- Status__c (Picklist: Requested, In Progress, Completed)

Technologies & Tools Used

TOOL / FEATURE	PURPOSE
Salesforce Lightning App	Custom application structure, navigation, and user experience.
Record-Triggered / Visual Flows	Real-time automation for order and dealer-assignment processes.
Apex Triggers / Classes	Custom business logic and stock/assignment processing.
Batch Apex	Bulk processing for larger data volumes and recurring updates.
Scheduled Apex / Jobs	Automated scheduled processing.
Validation Rules / Picklists	Data integrity and consistent status values.
Lightning App Builder	User-facing Lightning page and layout customization.

Testing Approach

- Test cases are prepared for major features including record creation, order status progression, flows, scheduled jobs, and Apex.
- Apex components should be supported by test classes and appropriate code coverage.
- Manual and automated validation is used for flows, records, and operational scenarios.
- The screenshots included below provide implementation evidence for key Salesforce features.

Security

- Profiles, roles, permission sets, sharing rules, and field-level access are used to control data access.
- Data-quality controls help maintain reliable customer and order records.
- Access should be aligned with responsibilities of sales, service, and administrative users.

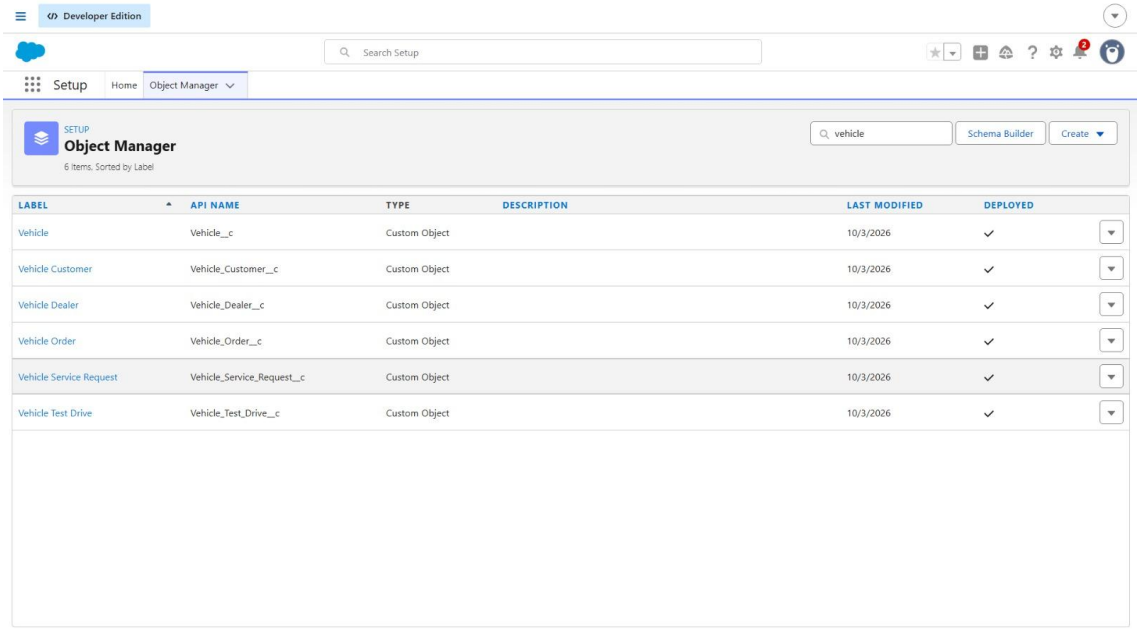

Future Enhancements

- Integration of AI-powered chatbots for customer support.
- Predictive analytics for sales and inventory management.
- Enhanced mobile experience for field agents and dealership users.
- Additional automation for delivery milestones and service reminders.
- Advanced dashboards and KPI reporting.

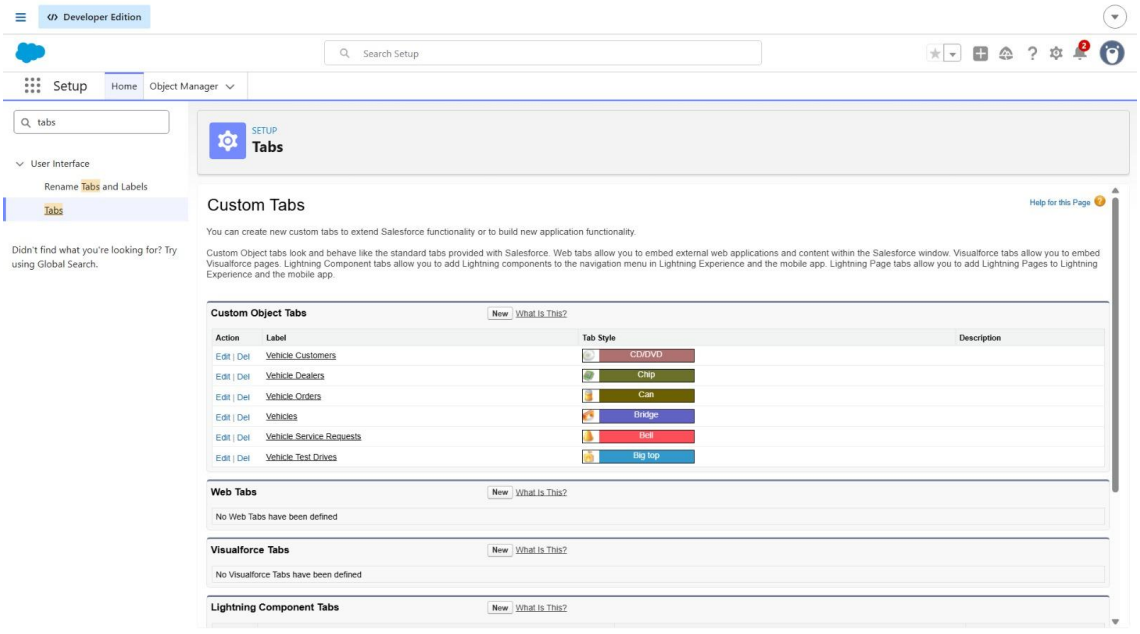

Screenshots & Implementation Evidence

The following screenshots are organized by feature so that the documentation shows not only what was built, but also the Salesforce configuration and record-level evidence supporting the implementation.

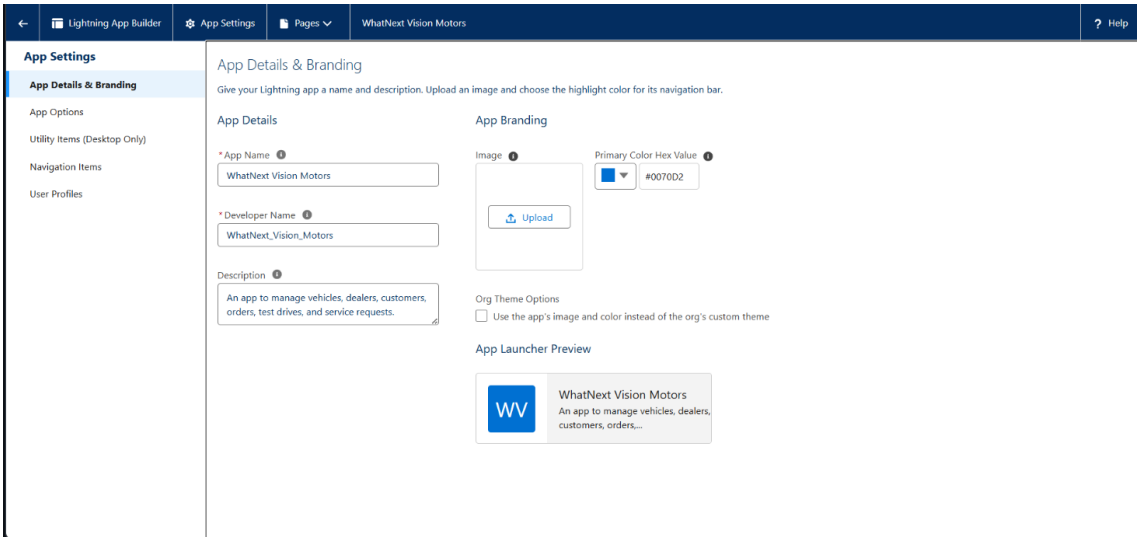

1. Data Management & Salesforce Configuration

Object Manager – custom object configuration and data model setup.

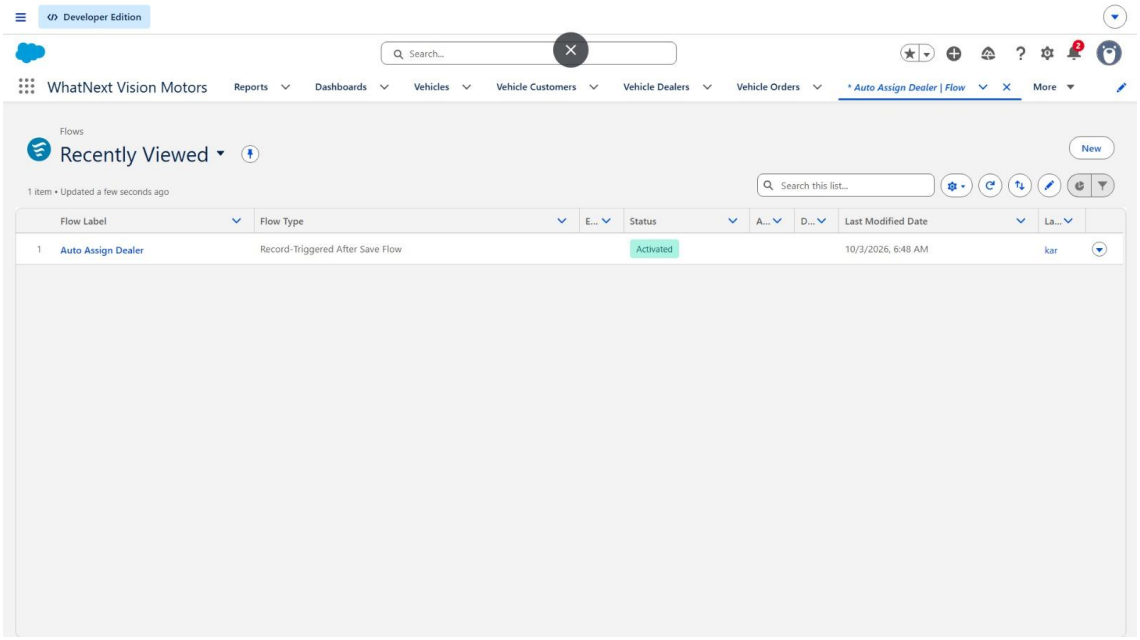

Tabs – navigation components configured for the Salesforce application.

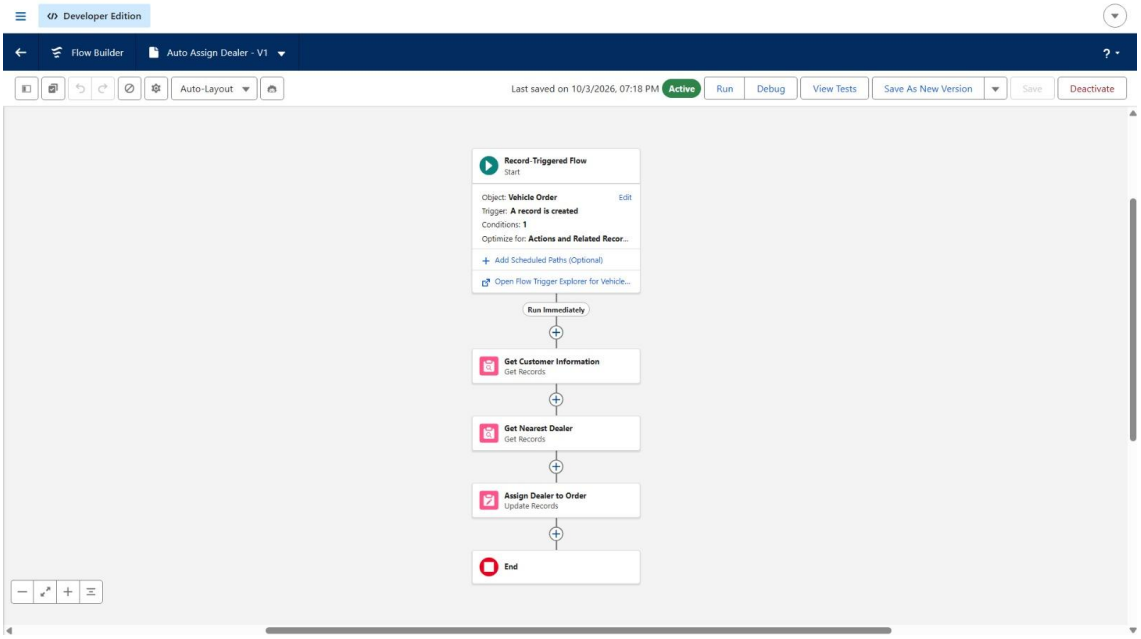

Lightning App Builder – application page and UI configuration.

2. Automation – Salesforce Flow

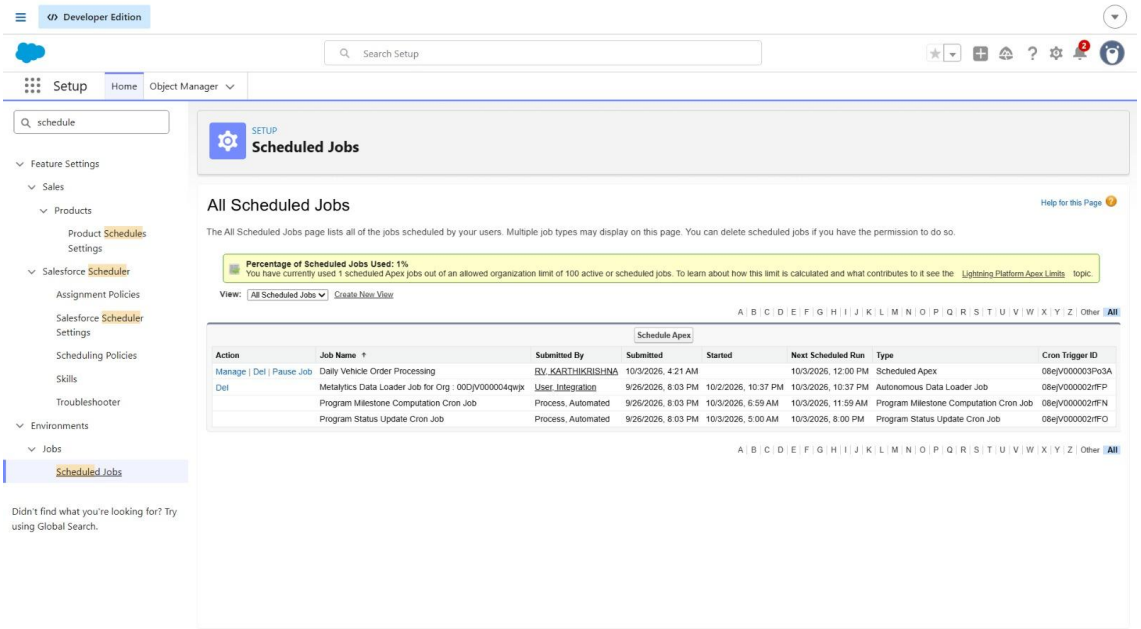

Flow page – automation workflow used in the project.

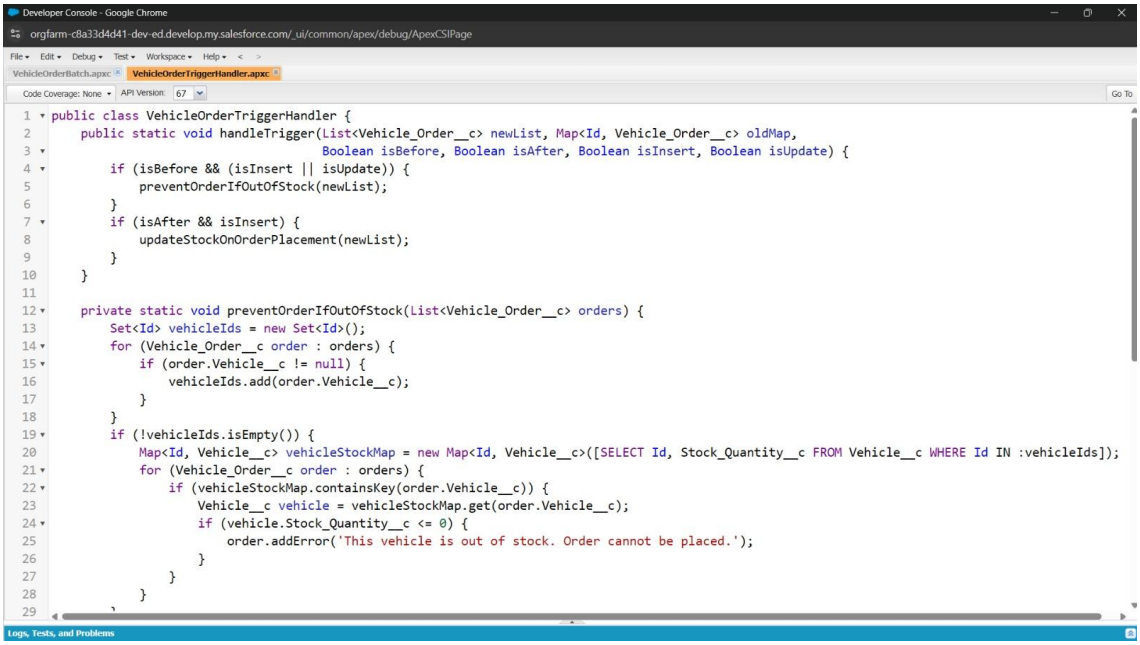

Flow Builder – assignment and automated processing logic.

3. Scheduled & Apex Processing

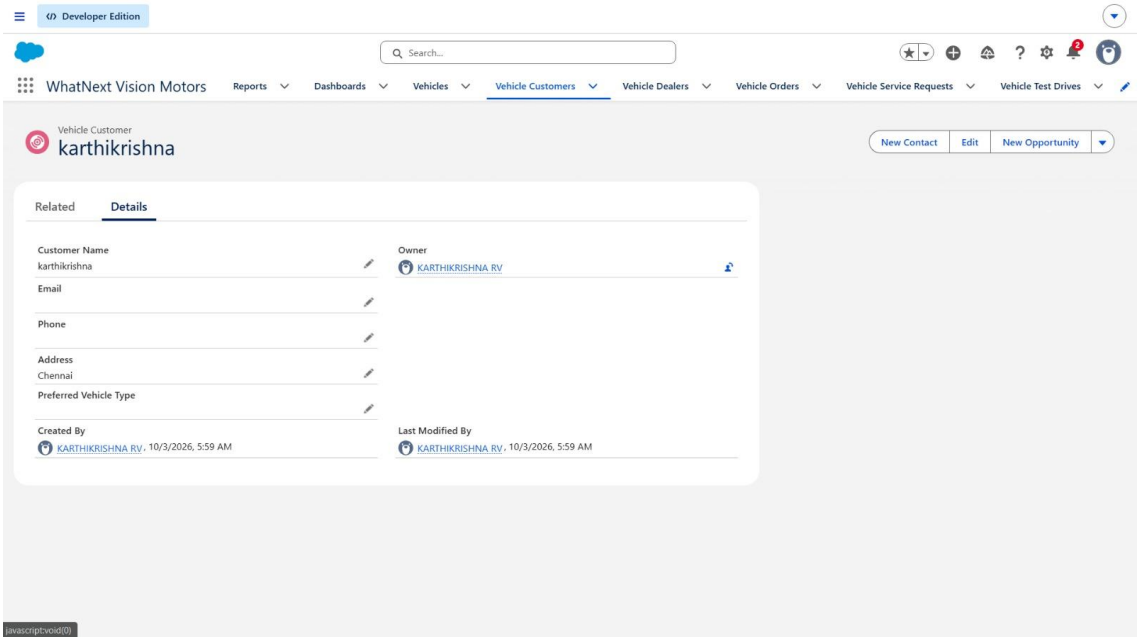

Scheduled Jobs – scheduled Salesforce processing.

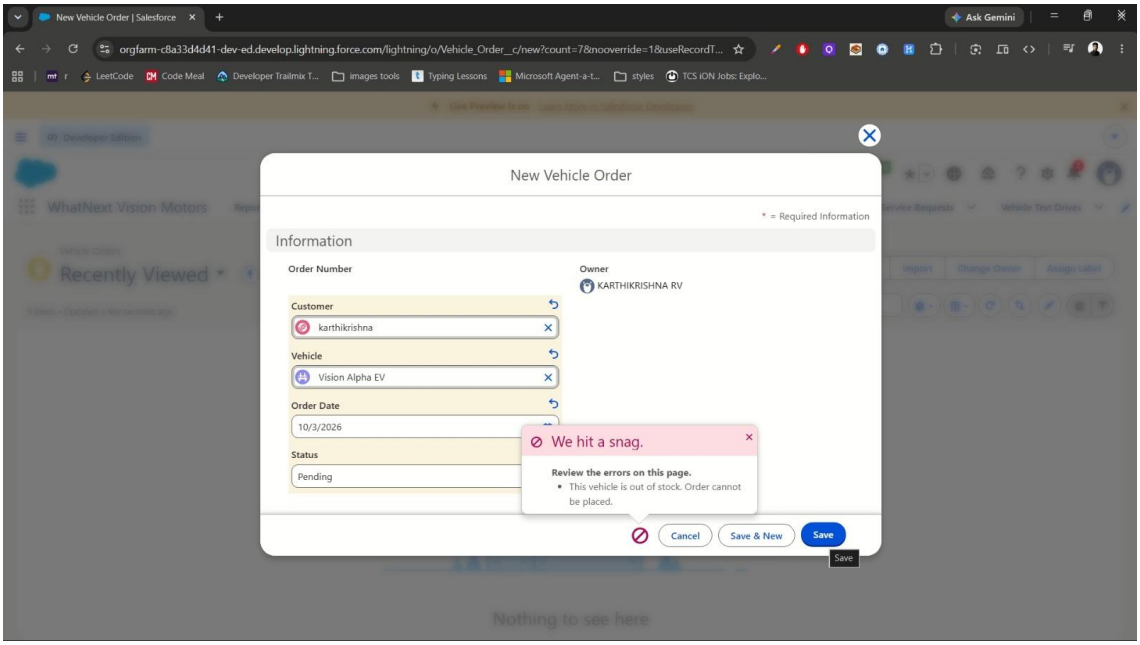

Apex Batch code – bulk processing implementation.

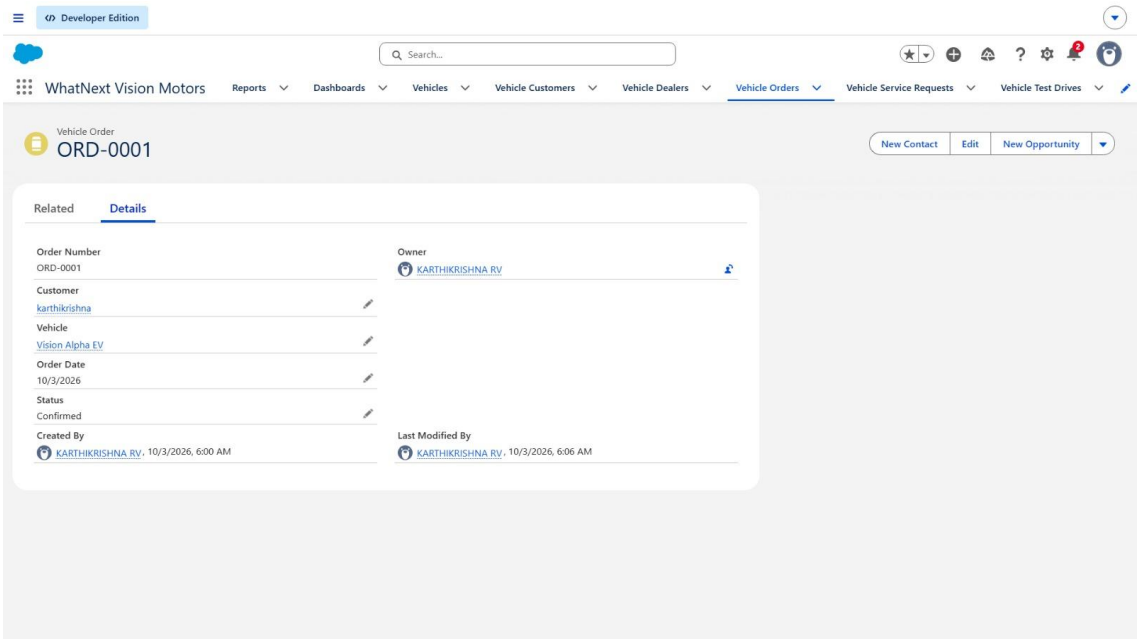

4. Customer & Vehicle Order Management

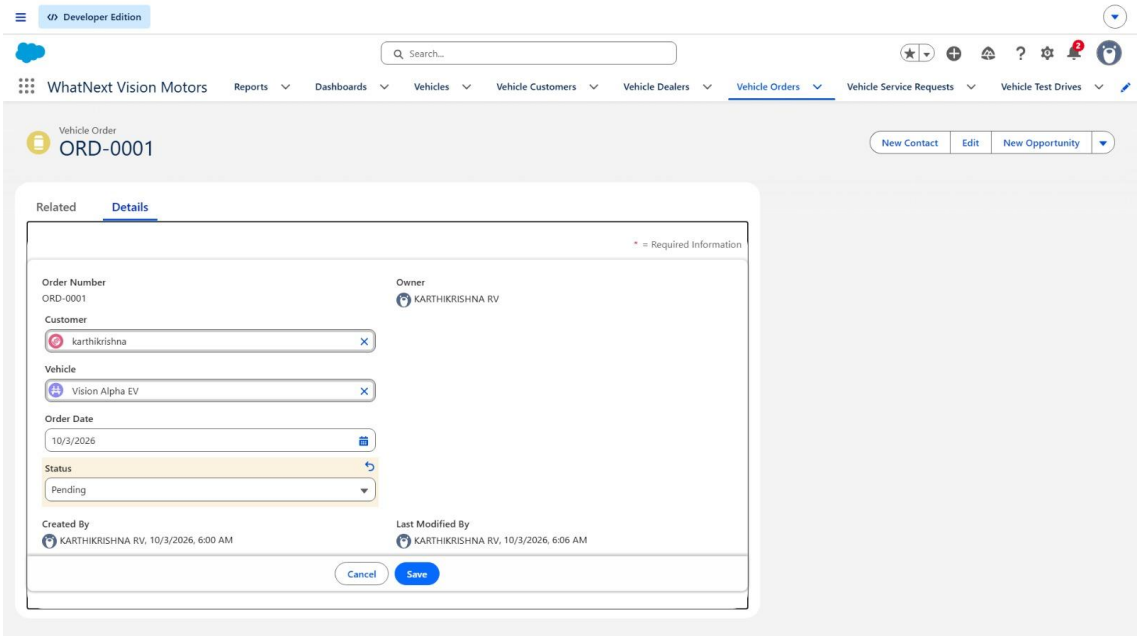

Vehicle Customer – customer information record.

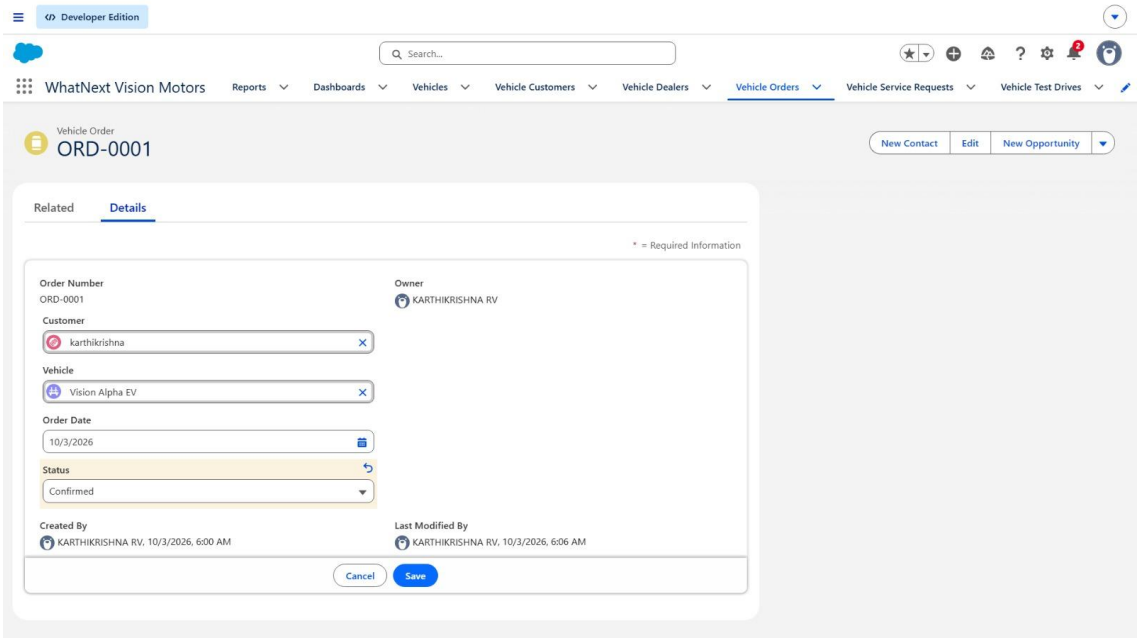

Vehicle Order – order record and associated information.

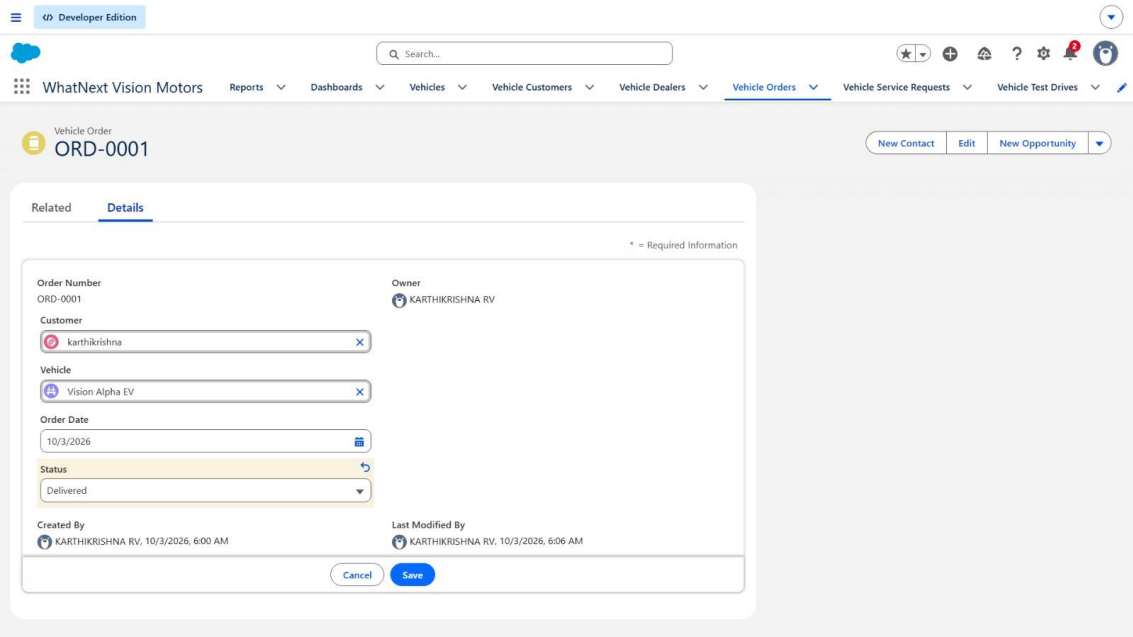

Vehicle Order – customer-linked order details.

Vehicle Order – Pending status scenario.

Vehicle Order – Confirmed status scenario.

Vehicle Order – Delivered status scenario.

What I Learned

- Designing scalable and normalized data models in Salesforce.
- Configuring custom objects, fields, relationships, tabs, and Lightning applications.
- Automating business logic using Salesforce Flow and Apex.
- Working with Batch Apex and scheduled processing.
- Applying validation and security concepts for reliable CRM data.
- Documenting Salesforce implementations with structured technical evidence.

Conclusion

The WhatsNext Vision Motors CRM project demonstrates how Salesforce can transform automotive retail operations by centralizing data, automating workflows, and improving visibility across customers, vehicles, and orders. The implemented configuration, automation, Apex processing, and documented screenshots provide a strong foundation for future innovation.
